

WASTE CHARACTERIZATION

Each generator must complete an ECOFLO Waste Characterization Form (Profile) in order to assure compliance with our permit. This profile will list the appropriate waste characteristics and contaminants based on material Safety Data Sheet, Analytical Results or Generator Knowledge.

Below are the CLIENT Responsibilities when profiling waste:

CLIENT Responsibilities To Timely Provide Accurate Information. Prior to ECOFLO's performance of any Services, CLIENT must complete and submit a completed ECOFLO Material Characterization Form in the format provided by ECOFLO ("Waste Characterization") and all Material Safety Data Sheets ("MSDS") applicable to each Waste. CLIENT must also provide to ECOFLO all other information when and as required by Law. Prior to ECOFLO taking control of the Waste, CLIENT must provide to ECOFLO all information necessary for ECOFLO to fully protect the environment, and the health and safety of employees, subcontractors, and the public, including, when necessary or requested by ECOFLO, the identity of the generator(s) of the Waste and descriptions of the CLIENT's procedures regarding the generation, processing, and handling of the Waste. CLIENT's Waste Characterization must be true, accurate, and complete. ECOFLO may request more specific information before providing the Services, and CLIENT agrees to timely provide such information to ECOFLO upon such request. Further, upon ECOFLO's request, CLIENT shall submit a sample of the Waste which represents the composition and condition of the Waste CLIENT will provide ECOFLO. In the event that CLIENT becomes aware of additional information about the Waste after it has provided a Waste Characterization to ECOFLO, CLIENT shall promptly inform ECOFLO and submit an amended Waste Characterization reflecting such additional information. Any change in a Waste Characterization shall be grounds for ECOFLO to revoke the Proposal or its acceptance of any related Purchase Orders(s) or Wastes.

ECOFLO's Reliance On CLIENT's Information. ECOFLO is entitled to and will rely on CLIENT's Waste Characterization to provide Services.
