

TITLE

Each generator, or their representative, must assure that the waste shipped is conforming to the Waste Characterization Form (Profile) submitted and approved. This is to assure compliance with our permit. This profile will list the appropriate waste characteristics and contaminants based on material Safety Data Sheet, Analytical Results or Generator Knowledge.

Below are the CLIENT Responsibilities related to assurances that waste received by ECOFLO is conforming to its corresponding Waste Characterization Form and when Title for said waste transfers from Generator to ECOFLO:

Conforming Waste. If the CLIENT's Waste conforms to the Waste Characterization and sample (if any), title to the Waste shall pass from CLIENT to ECOFLO when ECOFLO accepts the Waste (see section 7A) and signs the hazardous waste manifest accepting such Waste at its RCRA/TSCA permitted facility.

Nonconforming Waste. If CLIENT tenders Nonconforming Waste to ECOFLO, title to the Nonconforming Waste shall remain with CLIENT, regardless of the time at which the Waste is discovered or determined to be Nonconforming Waste.
